Karansinh Rathod

Software Engineer | Fintech Platforms · Python · Django · React · GCP · LLM/RAG

Ahmedabad, Gujarat · +91 63535 19944 · rathodkaransinh125@gmail.com · linkedin.com/in/karansinh-rathod-502383240

SUMMARY

Software engineer with nearly 3 years building and owning production fintech platforms at a SEBI-registered asset manager (₹3,000 Cr+ AUM, 800+ clients, PMS / AIF / GIFT-City IFSC mandates). Develops and maintains three in-house products end to end — investment research, an LLM research assistant, and investment operations — along with the market and fundamental data infrastructure that feeds all of them. Works across Python/Django and React on Google Cloud, with a strong bias toward automated testing, CI/CD, and replacing manual investment workflows with scheduled cloud jobs.

EXPERIENCE

Sameeksha Capital — SEBI-registered boutique asset management firm

Software Engineer · May 2024 – Present

Software Engineering Intern · Jan 2024 – Apr 2024 (converted to full-time)

Develop and maintain three in-house platforms end to end — architecture, core functionality, data layer and operations — used daily across the research, investment and operations desks.

RAW — Research Automation Works · research platform for ~40 analysts and Investment Committee members across a ~2,600-company universe

- Built the core research workspace: research notes, quarterly results, financial statements, CIO decisions and company coverage, on Django REST + React/TypeScript.
- **Analyst Portfolio Simulator:** simulates each analyst's recommendations as real order executions against Sameeksha's portfolio, then scores analyst performance with the same portfolio analytics used for live funds — surfaced in a Performance Dashboard that makes research calls measurable.
- Role-based access with row-level security by country, sector and company; real-time collaborative comments over Django Channels WebSockets.
- Automated research intake through 32 scheduled jobs and 20+ scrapers: corporate announcements, corporate actions and news, BSE insider trades, G-Sec yields, and management interviews transcribed with Whisper and summarized by Gemini.

RAW AI · retrieval assistant answering research questions over RAW as its primary source

- Built the RAG system over proprietary research and public filings: concalls, annual reports and investor presentations parsed with Document AI and LlamaParse, chunked, embedded into pgvector, reranked, and answered with citations back to the source document.
- **Result Update Report pipeline:** drafts an analyst's quarterly result update for a company from its concall transcript, investor presentation and earnings report PDF — a finely-grained section-wise prompt generates topline, margin, bottomline and segment performance along with actuals versus management guidance, each section grounded in the source documents.

OAT — Operation Automation Toolkit · order management and portfolio analytics for ~15 operations and portfolio staff

- **Order engine:** buy/sell/ETF order calculators with T+1 cash and settlement logic, percentage-of-volume allocation and contract-note processing; custodian order files generated, validated and delivered automatically.
- **Trade Suggestions:** merges analyst recommendations raised in RAW with Sameeksha's live portfolio positions to compute actionable trade suggestions — closing the loop from research call to execution.
- **Portfolio analytics and reporting:** XIRR/TWRR performance and benchmark reporting, management-fee billing, and custody and fund-accountant reconciliation.
- Integrated Zerodha Kite, Interactive Brokers, Nuvama and Zoho CRM; built an operations-checklist engine running 10 automated checks with Google Chat alerts, plus natural-language portfolio Q&A (text-to-SQL with Gemini, guarded by a SQL validator).

Engineering practice · across all three platforms

- 12,000+ automated tests behind an 80% coverage gate, with Bitbucket CI/CD, blue/green App Engine deploys and one-step rollback.

EXPERIENCE (CONTINUED)

TatvaSoft — Software development company

Summer Intern · Jul 2023 – Aug 2023

- Built the frontend of a book-store web application in React.js.

SELECTED PROJECTS

Platform and tooling work at Sameeksha Capital that serves all three products above.

Market Data Pipeline — Sameeksha Capital · 2024 – 2025

Python · Cloud Run · Zerodha KiteConnect · Interactive Brokers · PostgreSQL

- Designed broker adapters that normalize two very different market-data sources behind one interface — KiteConnect for Indian listed equities and IBKR for international coverage — writing live and historical prices into PostgreSQL.
- Built 7 Cloud Run jobs covering daily, intraday and VWAP prices, IBKR prices and USD/INR rates, and shipped a shared Python library installed into all three platforms as their single market-data access layer.
- Replaced a dedicated always-on VM that held an 8.5-hour websocket connection with scheduled Kite quote pulls, removing a standing point of failure and its compute cost.

Financial Data Pipeline — Sameeksha Capital · 2025

Python · ACE Equity · PostgreSQL · Cloud Scheduler

- Built the firm's fundamental data store: quarterly and annual results and full financial statements loaded into PostgreSQL through the ACE Equity Excel plugin instead of a vendor data API.
- Saved lakhs per annum in data-vendor API licensing while giving RAW and OAT direct SQL access to standardized financials for screening, valuation and analysis.

Claude PR Review Bot — Sameeksha Capital · 2025

Python · Docker · Claude API · Bitbucket Pipes

- Built a reusable Bitbucket Pipe that reviews every pull request with Claude in two stages: it first explores the repository with tools, then returns a structured assessment as inline PR comments.
- Each repository's CLAUDE.md acts as its review rulebook. The pipe is versioned, tested and runs in CI across 5 production repositories.

TECHNICAL SKILLS

- **Languages:** Python, TypeScript, JavaScript, SQL, HTML/CSS
- **Backend:** Django, Django REST Framework, Django Channels (WebSockets), scheduled batch jobs, REST APIs, OAuth 2.0, JWT
- **Frontend:** React, TypeScript, Vite, Material UI, AG Grid, Recharts, Vitest, React Testing Library
- **Data:** PostgreSQL, pgvector, pandas, NumPy, SQL migrations, Selenium, Playwright, BeautifulSoup
- **AI / LLM:** RAG pipelines, embeddings, reranking, prompt engineering, text-to-SQL, Gemini, Claude, OpenAI, Whisper, Document AI, LlamaParse
- **Cloud and DevOps:** Google Cloud (App Engine, Cloud Run, Cloud SQL, Cloud Storage, Cloud Scheduler, Cloud Build, Artifact Registry), Docker, Bitbucket Pipelines CI/CD, Git, LaunchDarkly
- **Testing:** pytest, Factory Boy, unit/integration/end-to-end suites, coverage gates
- **Capital markets domain:** PMS, AIF and GIFT-City IFSC mandates; order management and execution workflow; T+1 cash and settlement; percentage-of-volume allocation; contract notes and custodian files; XIRR/TWRR and benchmark performance; management-fee billing; custody and fund-accountant reconciliation; corporate actions and announcements
- **Market and fundamental data:** Zerodha KiteConnect, Interactive Brokers, Nuvama, ACE Equity, BSE filings, G-Sec yields, USD/INR

EDUCATION

L.D. College of Engineering, Ahmedabad — B.E. in Computer Engineering · 2020 – 2024
